Good Morning Sarge!

Sounds like you have a great ALPR demo plan - I'm excited to hear how it goes, the nuances between the systems, etc! As for training and support, you will be both fully trained and fully supported throughout the trial - I cannot emphasize enough, no call is too small! Please do not hesitate to reach out to anyone at Flock for help; however, you will have some Flock people that are specific to your support which will be introduced during your training. I will demure to Scout and Andrew to better answer the specifics of when/how the training will go.

Keep us posted on getting that agreement between the city and CDOT - perhaps Michael from Public Works might have more info on it. Lemme know if you have any questions!

Kindly,

Austen

I would like to run that concurrently with the Flock demo. I don't think that we will have to run through as many hoops to get that going because of the way that their trial agreement is written and we will already have the equipment, but I am running it by legal. My hope is to be able to show how beneficial it is to run both systems and all the data that we collect by doing so.

> As we get closer to going live is there some sort of training that you all will be able to provide us and what does customer support look like during the demo period? I really want to showcase the products and put us in the best position possible to advocate for continuing a partnership with you all.

Hey Sarge,

Can you get a hold of the agreement between the City of Boulder and CDOT (re: using traffic signals on CDOT roadways and NOT needing a permit)? Once we have that we can press forward. I know you don't work on Mondays so when you get settled on your monday, lemme know!

It's possible to mount it on the horizontal arm, directly over the lanes of travel; however, that would require a bucket truck and traffic control for every maintenance visit - not prohibitive, but definitely something to consider.

If you want to consider power, we need to know the voltage of the signal.

26 - I see your logic and moved it back to that traffic signal. Once camera will work for that area since it's one lane going into the parking lot

Let me know about the voltage for 18.

Thanks,

Austen

External Sender

Good Afternoon Sarge,

Here is the updated deployment link: https://planner.flocksafety.com/public/6cb00d77-4596-409e-89cb-1762e4aa74a1

A couple of notes:

2,7 - Possible tree trimming to be aware of
23 - Must have tree trimming
18 - no solar in new location - consider moving north one block to [redacted] on the traffic signal
26 - this camera was moved to a traffic signal pole [redacted] - not sure that's what you wanted. I moved it back to the original location on a [redacted] - do you want to apply for a CDOT permit?

After you have a chance to review this, please reply all to this email so we're all on the same page. As always, lemme know if you have any questions.
