Hi Professors,

Please see below for the back and forth with Fort Worth - they went ahead and sent over data you can look at now (attached).

Andrea

Thanks, so much, Joe, for following up with this data. We are working with researchers at TCU and UT Tyler to look at clearance rates pre- and post- Flock adoption. As this will be independent research, we may have the researchers connect with you directly if they are interested in looking into your data further within the next month or two. We really appreciate the help with this.

Best,

Andrea

We don't track anything like that specifically.

Thank you for clarifying. This is amazing work by the agency as a whole!

Joe, is the RTCC doing any separate tracking related to Flock? I know this is not always easy but if you have anything our team can use to marry this information together, let us know.

Those are the overall city homicide, robbery, and gun violence clearance rates. I do not know how many of the cases cleared are a direct result of Flock technology.

LaShanda,

This is incredible and I can't tell you how much we appreciate your efforts here. Just so I'm clear, these rates are all related to the Flock technology?

Thank you again,

Tonia Crump

Subject: FW: Flock Safety White Paper

Good afternoon,

I was told you would be the best person to get this information from.

Flock Safety is a company that utilizes License Plate Readers (LPR) to assist the police with apprehending criminals and solving cases more timely and effectively.

They are asking for information on Case clearance rates prior to 2020 (our implementation date) and since. Would you be able to assist with this?

Joe

Hello Sgt Shipp,

Flock Safety is working with criminology researchers at the University of Texas at Tyler and Texas Christian University to determine the impact of our technology on clearance rates and analyze how agencies use our technology to solve crime. The end result will be a white paper about this subject. The researchers are looking for an agency or agencies to use as case studies. In particular, they are interested in comparing an agency's clearance rates prior to adopting Flock Safety technology with clearance rates after adopting Flock Safety technology to see what impact this technology has had. This will require a bit of data sharing, but very little time commitment from you. Please let us know if you would be willing or interested to participate in this study.

You have already shared such great data on the crimes that you have solved using Flock technology. Would you be open to sharing similar clearance rate data for all crimes in your jurisdiction both before and after adoption of Flock? We are happy to anonymize the data for the case study if you would prefer, so the white paper would discuss data from "Agency A," for example, as opposed to naming your agency.

Please let us know if you are willing to participate or have any follow up questions.

Thanks so much,

Tonia Crump
