Subject: [EXTERNAL] FususONE Release Notes Version 7.0.0

Release Notes 7.0.0

Features & Enhancements

- Date formats now adjust according to US or UK accounts.

- Camera names can be searched in the Locations view.

- GeoJSON icons can be resized.

- The playback timeline as time increases while watching live video and every 5 minutes while not live.

- The list of recordings in the fūsusVAULT now includes the file size of a recording.

-

- Deleting chat channels
  - o Deleting chat channels will now "soft delete" instead.
  - o Once a chat channel is soft deleted, it can no longer be interacted with.
  - o No new messages will be accepted to the channel.
  - o Soft deleted chat channels will be deleted after 30 days.

- o Chat administrators will be able to view deleted channels and export them to the vault for preservation if desired.

  - o Soft deleted channels won't appear in other channel lists, thus helping customers tidy up their accounts whilst also retaining the ability for archive them.

  - o

- Users can control PTZ functions on cameras connected through the Avigilon Control Center.

- Integration with Buddi technology is available in the App Store in fūsusONE

-

Bug Fixes & Maintenance

- Fixed an issue where the CAD Drawer count and fususINVESTIGATE total incident count was incorrect

- Fixed an issue where icons were auto-locked after being placed on the map in incident management

- Fixed an issue where rewinding live video on cloud connected cameras went to midnight

- Turned off WebGL for CAD and AVL Layers to prevent crashing

- Fixed an issue where changing the map style makes the grid disappear in incident management

- Fixed issue where LPR Camera markers slowed down the map
